

00:37:32 **RYAN J COLLER:** I should have mentioned that the vision for our NHLBI work is to submit a larger follow-up grant to implement our intervention in more network sites in the next 2-3 years. Carlos, Paul, Jay, and Family Voices leaders (esp Carolyn Allshouse and Barbara Katz in WI) have been great champions helping us push this work forward.

01:22:17 **Meg Comeau:** Many academic centers have communications/marketing/PR folks who can help with dissemination, and they keep lists of speakers/content experts to refer reporters to

01:51:33 **Katie Freundlich, MD:** Caregiving and SDOH are both highly important areas within transition.

01:51:35 **Paul Chung (he, him):** Social determinants and finance are intimately connected-- not just because SDOH determine access to financing but because equitable financing can't be determined without accounting for SDOH.

01:52:46 **Dennis Kuo:** re: finance - also thinking that finance is beyond insurance design and is really any dollar that goes into supporting health for CYSHCN (which also goes back to what Paul just said)

01:52:52 **Debra Waldron, MD, MPH, FAAP:** It is important to look at the role of racism on child health

01:53:03 **RYAN J COLLER:** RE: Transitions: it'd be so great to figure out strategies to obtain funding to support research on youth-adult transitions.

01:53:57 **Carolyn Foster:** I wonder an exercise of mapping external funding priorities of different agencies and foundations onto our research agenda could help connect the dots on how each topic can find it's funding home

01:53:59 **Clarissa Hoover:** Ryan, work specific to diabetes might offer a pretty tight cost-benefit analysis

01:54:19 **Meg Comeau:** I agree that the process of transition could use more best-practice evidence but it also feels like more data on the barriers on the adult side would be helpful

01:54:21 **Paul Chung (he, him):** At yesterday's MCHB/NSCH meeting, a strong push was made to create research opportunities to connect adolescent transition activities with adult transfer outcomes.

*01:56:11* **Rui LI:** Ryan, If you need technical assistance for a CE specific to diabetes, please let me know. I used to be the economist at CDC on diabetes topics did many economic evaluation on diabetes prevention and control.

*02:00:55* **Debra Waldron, MD, MPH, FAAP:** Carolyn- Appreciate the "whole" adult approach

*02:03:51* **Clarissa Hoover:** Depression and anxiety mediate the relationship between holistic outcomes and health

*02:05:46* **Katie Freundlich, MD:** Are workforce issues a blind spot?

*02:06:20* **Clarissa Hoover:** Probably several - which workforce are you thinking of?

*02:07:12* **Katie Freundlich, MD:** I think Chris is speaking to one area--the other would be adult caregivers able to accept CYSHCN

*02:10:31* **HRCC Houston (Ricardo Mosquera):** I think we should try to do more multi center clinical trials or others sophisticated design studies.

*02:53:43* **Alex Kuznetsov - AAP:** it seems like telehealth may have a huge role to play in increasing access in terms of the place-based approach.

*03:00:00* **Paul Chung (he, him):** This is a semi-old article (2018), but it discusses pediatric network adequacy relevant to CYSHCN  
<https://www.healthaffairs.org/doi/pdf/10.1377/hlthaff.2017.1339>

*03:18:39* **Alex Kuznetsov - AAP:** Could also think about how the role of telehealth can support integrated care.

*03:19:25* **Meg Comeau:** A co-occurring concern is inequities in integrated care (racial, income, complexity of care needs, ID/DD)

*03:41:50* **Carolyn Foster:** This is the source of that funding: Funding Opportunity Number CMS 2B2-20-001 from the U.S. Department of Health & Human Services (HHS), Centers for Medicare & Medicaid Service
